Summary

Computer Engineering graduate and Full-Stack .NET Developer with hands-on experience in ASP.NET Core, Angular 22, EF Core, SQL Server, and REST APIs. Contributed to a production ASP.NET Core Web API at Gulf Insurance Group, including third-party integrations involving JoPACC and IDWise. Building a multi-tenant Warehouse Management System using Clean Architecture, CQRS, and an API-connected Angular frontend.

Education

Jordan University of Science and Technology (JUST) Irbid, Jordan
B.Sc. in Computer Engineering | GPA: 3.12/4.00 – Very Good *June 2026*

Experience

Gulf Insurance Group (GIG) Amman, Jordan
Software Developer Intern *Feb 2026 – May 2026*

- Contributed to a production ASP.NET Core Web API for travel insurance, implementing RESTful endpoints and business logic in collaboration with frontend and database teams.
- Worked with JoPACC and IDWise integrations, mapping third-party API requests and responses and connecting external services to application workflows.
- Debugged C# and ASP.NET Core code to investigate application and integration errors, testing API endpoints and responses using Swagger and Scalar.

Projects

Multi-Tenant Warehouse Management System (In Progress)

ASP.NET Core, Angular 22, TypeScript, EF Core, SQL Server, MediatR, FluentValidation

- Architected a full-stack multi-tenant WMS using Clean Architecture (Domain, Application, Infrastructure, API), CQRS with MediatR, and FluentValidation.
- Implemented tenant-aware data access using EF Core global query filters and SaveChanges interceptors, with JWT authentication and role-based authorization.
- Developed the Angular 22 frontend using TypeScript, Signals, RxJS, Reactive Forms, lazy-loaded feature routes, role guards, and JWT HTTP interceptors.
- Built SQL Server-backed modules for warehouses, hierarchical locations, products, partners, and inventory reporting; developing Purchase Order and stock-receiving workflows.

Grab&Go – Autonomous Smart Store System

ASP.NET Core, SQL Server, ADO.NET, SignalR, MQTT, HiveMQ, JavaScript

- Built an ASP.NET Core backend connecting vision-generated tracking IDs and MQTT product events to customer sessions, updating carts as items were picked up or returned.
- Implemented transactional checkout and wallet workflows with ADO.NET and SQL Server stored procedures, including duplicate-event checks and invoices.
- Integrated HiveMQ messaging with JWT-authenticated SignalR groups to deliver real-time cart updates to the correct shopping session.

Driving & Vehicle License Department (DVLD) System

C#, .NET Framework, Windows Forms, SQL Server, ADO.NET

- Built a multi-layer licensing application covering applications, tests, renewals, replacements, and license detention, with C# business rules and SQL Server data access using ADO.NET.

Pizza POS System

C#, Windows Forms, .NET Framework, SQL Server, ADO.NET

- Built a Windows Forms POS supporting customizable orders, SQL-backed order history, inventory updates, digital receipts, and a sales dashboard.

Technical Skills

Languages: C#, TypeScript, JavaScript, SQL (T-SQL), HTML/CSS

Backend & APIs: ASP.NET Core Web API, .NET Framework, REST APIs, SignalR, JWT Authentication

Frontend: Angular 22, RxJS, Reactive Forms, Tailwind CSS

Databases & Data Access: SQL Server, EF Core, ADO.NET, Stored Procedures, SSMS

Architecture & Tools: Clean Architecture, CQRS, MediatR, FluentValidation, Git, GitHub, Docker, Swagger, Scalar, MQTT/HiveMQ
