Summary

Computer Engineering graduate and Full-Stack Developer with experience building applications using ASP.NET Core, Angular 22, EF Core, SQL Server, C#, and TypeScript. Contributed to a production ASP.NET Core Web API at Gulf Insurance Group and built projects involving multi-tenant systems, real-time communication, REST APIs, relational databases, and desktop applications. Strongest in backend development and databases, with practical experience across the full stack.

Education

Jordan University of Science and Technology (JUST) Irbid, Jordan
B.Sc. in Computer Engineering | GPA: 3.12/4.00 – Very Good *June 2026*

Experience

Gulf Insurance Group (GIG) Amman, Jordan
Software Developer Intern *Feb 2026 – May 2026*

- Contributed to a production ASP.NET Core Web API for travel insurance, implementing RESTful endpoints and business logic while working with frontend and database teams.
- Worked with JoPACC and IDWise integrations, mapping third-party API requests and responses and connecting existing services to application workflows.

Projects

Multi-Tenant Warehouse Management System (In Progress)

ASP.NET Core, Angular 22, TypeScript, EF Core, SQL Server, MediatR, FluentValidation

- Building a full-stack warehouse system with JWT authentication and tenant-aware data access that isolates each organization's users and warehouse data.
- Implemented tenant provisioning and backend features for users and roles, warehouses, hierarchical locations, products and categories, suppliers and customers, inventory queries, and purchase-order creation.
- Developing the Angular frontend with Tailwind CSS, API-connected authentication, route guards, JWT request handling, role-aware navigation, reusable layouts, and warehouse pages.

Grab&Go – Autonomous Smart Store System

ASP.NET Core, SQL Server, ADO.NET, SignalR, MQTT, HiveMQ, JavaScript

- Built the backend that maps vision-generated tracking IDs and product events to active customer sessions, updating carts as items are picked up or returned.
- Implemented store entry, cart, and checkout workflows with ADO.NET and SQL Server stored procedures, including duplicate-event checks, wallet updates, transaction records, invoices, and session completion.
- Processed real-time events through hosted HiveMQ and used JWT-authenticated SignalR groups to send cart updates only to the corresponding shopping session.

Pizza POS System

C#, Windows Forms, .NET Framework, SQL Server, ADO.NET

- Built a Windows Forms POS with customizable pizza orders, configuration-based duplicate handling, SQL-backed order history and digital receipts, inventory updates, and a sales dashboard with revenue and best-selling product statistics.

Driving & Vehicle License Department (DVLD) System

C#, .NET Framework, Windows Forms, SQL Server, ADO.NET

- Built a multi-layer licensing system covering local and international license applications, Vision/Written/Road tests, renewals and replacements, and license detention and release, with C# business rules and relational data access using ADO.NET.

Technical Training

Programming Advices – Software Development Roadmap Apr 2024 – Present
Structured curriculum and project-based practice

- Completed a structured software-development roadmap covering programming fundamentals, problem solving, OOP, data structures, C#, SQL and database design, ADO.NET, T-SQL, software architecture, Git/GitHub, REST APIs, ASP.NET Core authentication and authorization, HTML, CSS, JavaScript, and TypeScript through project-based practice.

Technical Skills

Languages: C#, TypeScript, JavaScript, SQL (T-SQL), HTML/CSS

Frameworks & Backend: ASP.NET Core, Angular 22, EF Core, ADO.NET, Tailwind CSS, SignalR

Architecture & APIs: REST APIs, Clean Architecture, CQRS, MediatR, JWT Authentication

Databases & Tools: SQL Server, Git, GitHub, Docker, SSMS, MQTT/HiveMQ
