Summary

Computer Engineering graduate targeting junior Full-Stack .NET Developer roles, with experience contributing to a production ASP.NET Core Web API at Gulf Insurance Group. Independently developed a multi-tenant Warehouse Management System using C#, SQL Server, Entity Framework Core, and Angular, implementing role-based authorization and end-to-end inventory workflows.

Experience

Software Developer Intern Amman, Jordan
Gulf Insurance Group (GIG) *Feb 2026 – May 2026*

- Developed RESTful API endpoints and business logic using C# and ASP.NET Core for a production travel insurance application.
- Investigated and debugged application issues, troubleshooting errors and validating API requests, responses, and endpoint behavior using Swagger and Scalar.
- Collaborated with frontend and database teams to coordinate backend development and align API functionality with application and database requirements.

Projects

Multi-Tenant Warehouse Management System *Aug – Oct 2026*
ASP.NET Core, Angular 22, TypeScript, EF Core, SQL Server, MediatR, FluentValidation

- Implemented tenant-scoped data access using EF Core global query filters and SaveChanges interceptors, with server-side role policies separating platform administration from warehouse operations.
- Developed end-to-end warehouse workflows covering purchase-order approval, partial receiving, dock-to-bin putaway, sales-order stock allocation, and partial pickup, with inventory updates and movement tracking.
- Implemented JWT authentication with rotating refresh tokens, secure HttpOnly cookies, session revocation, and per-request user and tenant validation.
- Built Angular purchasing, putaway, and sales-order interfaces using Signals, RxJS, and Reactive Forms, integrating API workflows, validation, and conflict handling.

Grab&Go – Autonomous Smart Store System *Apr – Jul 2026*
ASP.NET Core, SQL Server, ADO.NET, SignalR, MQTT, HiveMQ, JavaScript

- Built an ASP.NET Core backend connecting vision-generated tracking IDs and MQTT product events to customer sessions, updating carts as items were picked up or returned.
- Implemented transactional checkout and wallet workflows with ADO.NET and SQL Server stored procedures, including duplicate-event checks and invoices.
- Integrated HiveMQ messaging with JWT-authenticated SignalR groups to deliver real-time cart updates to the correct shopping session.

Driving & Vehicle License Department (DVLD) System *Sep – Dec 2025*
C#, .NET Framework, Windows Forms, SQL Server, ADO.NET

- Built a 3-tier architecture licensing application covering applications, tests, renewals, replacements, and license detention, with C# business rules and SQL Server data access using ADO.NET.

Technical Skills

Languages: C#, TypeScript, JavaScript, SQL (T-SQL), HTML/CSS

Backend & APIs: .NET, ASP.NET Core Web API, .NET Framework, REST APIs, SignalR, JWT Authentication, Dependency Injection

Frontend: Angular 22, RxJS, Reactive Forms, Tailwind CSS

Databases & Data Access: SQL Server, Entity Framework Core (EF Core), LINQ, ADO.NET, Stored Procedures, SSMS

Architecture & Tools: Object-Oriented Programming (OOP), SOLID Principles, Clean Architecture, CQRS, MediatR, FluentValidation, Git, GitHub, Docker, Swagger, Scalar, MQTT/HiveMQ

Education

Jordan University of Science and Technology (JUST) Irbid, Jordan
B.Sc. in Computer Engineering | GPA: 3.12/4.00 – Very Good *June 2026*
